7. Brief Report : Cancer is one of the most pressing public health challenges India faces today. The rise in cancer cases is compounded by the fact that many patients present at advanced stages, leading to poor outcomes. India's cancer landscape is shaped by multiple lifestyle-related risk factors. Tobacco consumption, whether through smoking or chewing, is the single most significant contributor to cancer in India. It is responsible for an estimated 40–50% of cancer cases in men and 20% in women. Oral cancers, in particular, are a major concern, with chewing tobacco being more prevalent in certain regions of the country. On November 7th each year, India observes National Cancer Awareness Day—an initiative that aims to raise awareness about the growing cancer burden in the country and inspire action towards prevention, early detection, and treatment. India is the first country in the world to officially recognize National Cancer Awareness Day. The date was chosen not only to honor the birth of Nobel Laureate Madame Marie Curie, who discovered radioactivity and whose work has had a profound impact on cancer treatment but also to reflect India's commitment to addressing cancer as a public health priority Programme outputs. To raise the awareness about the cancer to the students and public, Dept. Of Zoology has conducted the National Cancer Awareness Day Programme on 07-11-2024. The theme	

of this programme (2024) is "raising awareness about cancer prevention, early detection, and improving access to treatment". Through this programme we prepared a pamphlet about cancer, distributed to the public and also pasted in public areas.

Dr. B. Purushotham, Principal told about the BMI, Nutritional food and stages of Cancer. Dr. B. Adinarayana, HOD of Botany, Dr. N. Chandra Mohan, Lecturer in Zoology, S. Bhaskar Rao, B. Sujatha, B. Nagesh Babu and students were involved in this programme.
